The Morbidity of Vernal Keratoconjunctivitis

[Pak J Ophthalmol](#) Jul 2001;17(3):86-9.

Abbasi Shahedd Hospital, Karachi

A retrospective study of 73 patients of Vernal Keratoconjunctivitis (VKC) was conducted at a charitable hospital (LRBT Eye Hospital) in Swat from July 1998 to April 1999. Ages of the patients ranged from 4 years to 18 years. Out of these, 64 were male patients. The age group mostly involved was 10 years or below and males were more affected. Effective treatment in decreasing order was Lodoxamide, Sodium Cromoglycate and steroids.
